Presentation

Operator

Welcome, ladies and gentlemen, to the analyst and investor webinar on the First Quarter Results for HSBC Holdings plc. For your information, this webinar is being recorded. I will now hand over to Georges Elhedery, Group CEO.

Georges Bahjat Elhedery

CEO, Member of the Group Management Board & Executive Director

Welcome all to today's call. I'm joined here in London by Pam. Before Pam takes you through the numbers, I would like to begin with some opening remarks. Overall, there was a strong quarter marked by three key drivers: momentum in our earnings, discipline in our execution, and confidence in our ability to deliver our targets.

First, we have strong momentum in our business. We had a strong first quarter with profit before tax up 11% and an annualized return on tangible equity of 18.4%, both excluding notable items.

We had our fifth consecutive quarter of double-digit growth in Wealth and attracted net new invested assets of \$22 billion as well as another 300,000 new-to-bank customers in Hong Kong, continuing the trend from last year. We also had a strong performance in Transaction Banking, in particular, in FX. And our equities and debt trading businesses, benefiting from higher client activity on the back of higher volatility.

Second, we remain focused on executing our strategy with discipline and are on track to deliver the cost actions we set out in February. We are progressing at pace to deliver on the simplification-related cost saves as well as the strategic cost reallocations. We also continue to take a disciplined approach to our investments and capital allocation to drive growth across our four businesses. We will provide you with a full update on this at the half year results in July.

Third, the external macroeconomic environment is less favorable and more uncertain than it was in February as the uncertainty around trade policy dampens business confidence and constrains investment. However, we remain confident in our ability to deliver our targets. Our balance sheet is strong. This is reflected in the deposit surpluses we hold in every major currency in each of our four businesses in every geography in which we operate.

This is why our clients place their trust in us during times of predictability and even more so during times of unpredictability. These provide us with a steady recurring income stream and underpin the lion's share of our banking NII.

Growing our structural hedge has reduced the sensitivity of these revenues to interest rate cuts. Our balance sheet is also underpinned by a strong capital position and a high-quality credit portfolio. We also have resilient recurring fee income from stable floor-based activities in transaction banking and in wealth, with a much smaller contribution from investment banking event-driven business. I encourage you to keep the diversity and quality of our earnings in mind when considering how changes in trade policy will affect our business.

Our wholesale transaction banking business covers much broader activities than those related to cross-border trade. And within our trade finance business, we have diverse products, and cover all major global and intra-regional corridors. To assess the impact, higher tariffs could have on our business, We modeled scenarios that contemplate significant but plausible increases in tariffs by the world's largest trading blocks, resulting in a notable slowdown in global trade as well as a slowdown in global GDP growth. In a plausible downside tariff scenario, we estimate that there would be a low single-digit percentage impact on the group's revenues.

Separately, our consensus downside scenario models a slowdown in global trade and GDP growth as a result of an increase in tariffs. The impact of this scenario would be incremental ECLs of \$0.5 billion. On this basis, we remain confident in delivering a mid-teens return on tangible equity for 2025, 2026 and 2027 and are reaffirming all of the guidance that we gave in February. We recognize, though, that the broader impacts of the current conditions are more difficult to quantify, and we will continue to monitor these as we formulate our ongoing outlook. Importantly, in the current environment, customers look for the strength, stability and expertise of a trusted partner.

We are extremely well positioned to support all of our customers wherever they are; however, they need to evolve and whatever the market conditions. Finally, we're also pleased to announce an up to \$3 billion share buyback and a \$0.10 per share interim dividend, reflecting our continued focus on capital return to our investors.

With that, let me hand over to Pam.

Manveen Pam Kaur
Group CFO & Executive Director

Thank you, Georges. Thank you, everyone, for joining. The momentum in our business has enabled us to deliver a strong first quarter performance headlined by an annualized return on tangible equity of 18.4%, excluding notable items. We had very good underlying profit and revenue performances.

Credit remained stable, and we maintained a disciplined approach to cost management. We are pleased to announce a first interim dividend of \$0.10 per share and a share buyback of up to \$3 billion. The buybacks we completed over the last 12 months have helped take us closer to our target range of 14% to 14.5% CET1. We will continue to return surplus capital to shareholders with buybacks remaining our preferred method. As always, a decision on any share buyback will be made on a quarterly basis. It will depend on organic capital generation and the capital needs of the business.

Unpacking the revenue story, excluding notable items, revenue of \$17.7 billion was up \$1.1 billion on the first quarter of last year, driven by fee and other income. It also included a \$0.3 billion increase in debt and equity markets driven by higher volatility and a favorable impact of \$0.2 billion in the quarter from the disposal of Argentina, which we completed at the end of last year.

On banking NII, excluding the impact of Argentina, and other notable items, the banking NII run rate remained broadly stable for the -- on the fourth quarter. The impact of interest rate cuts and to fewer days in the quarter were offset by the repricing of liabilities and structural hedge assets and some favorable changes in asset mix.

We continue to expect banking NII of around \$42 billion in 2025. As previously stated, this is not an underpin. It remains our expectation at the present time, based on the current market rates outlook and our own projections.

Moving to fee and other income. Wholesale transaction banking was up 13% on last year's first quarter. This was driven by a strong FX performance as elevated volatility drove substantial volumes of client hedging activity. Excluding the impact of disposals, Global Payment Solutions was up 3% year-on-year, and Global Trade Solutions was up 6%. In Wealth, the strong momentum from the fourth quarter continued, as we delivered our fifth consecutive quarter of double-digit year-on-year growth.

High client activity levels in Asia, primarily Hong Kong were the key driver, and there was broad-based growth. We are pleased that the investment we are making in our Wealth products, distribution channels and customer journeys is translating into results. A record new business CSM 301,000 new-to-bank customers in Hong Kong and \$22 billion of net new invested assets, \$16 billion of which was in Asia. The CSM balance, which is a store of future value was up again this quarter. As you know, the CSM balance is subject to market fluctuations and sensitivities to key indices are in the earning release.

On credit, our first quarter ECL charge of \$0.9 billion equivalent to an annualized charge of 37 basis points as a percentage of loans and advances. This included a \$150 million provision to reflect heightened economic uncertainty. Excluding this, the first quarter charge was broadly the same as in the first quarter of 2024. The credit risk metrics that we track remains stable, and we continue to monitor them closely. Thinking about the potential impact of tariffs on credit performance, ECLs will be sensitive to macroeconomic performance, the outlook for which remains uncertain. We consider a variety of scenarios as part of our ECL calculation.

One of these is the consensus downside scenario, in which an increase in tariffs results in a global economic slowdown. In this scenario, there would be an incremental ECL charge of around \$0.5 billion.

On costs, we are taking a disciplined approach to cost management and are on target to achieve our target of around 3% cost growth in 2025, compared to 2024 on a target basis. We are also on track to deliver \$0.3 billion of simplification savings into the P&L in 2025.

On loans and deposits, loan balances were broadly stable quarter-on-quarter, as growth in Corporate and Institutional Banking was offset by the reclassification of our retained French home loan portfolio.

Deposits were also broadly stable quarter-on-quarter with a partial reversal of some of the seasonal inflows we saw in Q4. Year-on-year, deposits were up 6% with growth in all entities and businesses. Our CET1 ratio was 14.7%. The reclassification of our retained French home loan portfolio led to a \$1.3 billion pretax loss in the quarter, recognized in fair value through other comprehensive income. This had a capital impact of around 0.2 percentage points of CET1.

Looking ahead, we expect the buyback we announced today to have an impact of around 0.4 percentage points in the second quarter. You will have seen that BoCom has announced that it has approved a share issuance of up to RMB 120 billion. Upon completion, we

expect to recognize an accounting impact dilution loss of between \$1.2 billion and \$1.6 billion on our stake. This will be treated as a material notable item and will have no material impact on CET1 and no impact on the dividend.

Let me end by summarizing. First, we have momentum in our earnings. We had a strong first quarter performance with an annualized return on tangible equity of 18.4%, excluding notable items. We have also continued to perform well in the quarter to date.

Second, we have discipline in our execution. We are on track to deliver the cost actions we set out in February. Third, although the external environment is more uncertain we are confident in our ability to deliver, and we are reaffirming our existing targets and guidance. This includes a mid-teens return on tangible equity in 2025, 2026 and 2027.

Louis, can we go to Q&A, please?

Question and Answer

Operator

Thank you, Pam. [Operator Instructions] Our first question today comes from Benjamin Toms at RBC.

Benjamin Toms

RBC Capital Markets, Research Division

Firstly, you mentioned in the release that you've launched a strategic review of Malta, full year results. We were relatively early in the strategic refresh process, the other geographies that you're also strategically reviewing in the full year results, you talked about \$1.5 billion of gross cost saves. Now you're deeper into that process. Have you seen any potential to be able to achieve cost saves in excess of that target?

And then secondly, one of the features of your Q1 results was the strength in fees and other income. Can you provide some color on how sustainable that print is and how much is driven by the augmented volatility?

Georges Bahjat Elhedery

CEO, Member of the Group Management Board & Executive Director

Thank you very much, Ben. So we've announced at the -- in February, \$1.5 billion of cost sales from the organizational simplification, which we expect to take to the bottom line. And as Pam shared earlier, we are on track to deliver those, and we're moving at pace. We separately announced \$1.5 billion from strategic reallocation of costs from activities that are non-strategic or low returning into our core strategy where areas of our competitive strength.

We continue to progress at pace on those. And we've made a number of announcements, which we've shared, including the investment banking in Europe and the U.S., including the French insurance, the private bank in Germany, et cetera. And we're progressing with those at pace. And again, on both items, we continue the execution with discipline and pace and we're not phased -- we remain unfazed with the external environment for the execution of those. This is our primary focus now. It's just focusing on delivering those.

As a matter, kind of cost efficiencies as a matter of BAU, if you identify cost efficiencies, we will, of course, be taking them as a matter of BAU, but our primary focus is to deliver on those commitments.

With regards fees and other income, look, we've talked to the plausible downside scenario, which may put some -- that it's an adverse scenario, but it is a plausible scenario. And it will slow down parts of our business in trade flows, but also the implication it has on other aspects of our business, including the volumes in general. But outside, I would say, this adverse scenario, we continue to see strength in the Wealth business, 5 quarters double-digit growth, which we expect to continue in the medium term, at least for the medium term, and we continue to invest in this space. And we continue investing in a number of areas as we called out in February, because we believe in the growth potential that we can exhibit in these areas.

Manveen Pam Kaur

Group CFO & Executive Director

So Ben, just to add, I mean, for the quarter, there's been good performance, and there's been a high level of client activity, which has benefited FX debt equities markets and wealth. Also, I want to just remind that one benefit was also the Argentina headwind that we had of \$0.2 billion in Q1 of '24, which obviously didn't repeat in this quarter because of the sale. But the key franchise factors are, Wealth, it's a structural growth, and those dynamics will persist. They are driven by our brand, they're driven by the range of products we have to offer, the improvements we've made in terms of technology, and that investment is good pay.

And as Georges said, we stay confident in terms of double-digit growth in the medium term. On wholesale transaction banking, it remains an area of competitive advantage. We will continue to grow there, but it's going to be hard to predict quarter-to-quarter, especially in the current environment. Volatility has definitely benefited us in this quarter. So it may not repeat at the very high levels that we've seen in this quarter, but we are still continuing to see underlying growth as we have progressed through in Q2.

Operator

Our next question today comes from Joseph Dickerson at Jefferies.

Joseph Dickerson

Jefferies LLC, Research Division

spglobal.com/marketintelligence

Congrats on a strong set of numbers and some clarity on your thinking on the path forward. Can I just ask on the plausible downside scenarios for the low single-digit impact on revenue. I guess, what was the point of undertaking that exercise? Was it to basically show that the perception of the bank is a global trade bank in some ways, maybe exaggerated about how you're not -- basically, you're not overly reliant on any particular corridors. And I guess, what kind of elements went into that scenario in terms of magnitude of drawdown on trade.

And then secondly, just on that, could you opine on any opportunities that you're seeing or that you foresee as a result of what's happening, not that necessarily starting at the moment, but just any opportunities that you're going to see based on any initial discussions?

And then, I would presume that the -- you had a very strong new-to-bank customers in Hong Kong. I presume -- can you make any comment on April trends there? I would have presumed that, that would have continued from last quarter if what we're picking up on the ground in Hong Kong is accurate.

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

I'll take your question about the positioning of our trade business and our bank as well as the opportunities. And I'll ask Pam to take you through the elements of this analysis. So we are the world's trade bank. We have been ranked the #1 trade bank for 8 consecutive years. But our trade covers a variety of products as well as we cover all the large corridors of trade, including intra-regional corridors, which have been growing quite fast over the last few years.

The exercise that we've conducted is meant to basically evaluate the impact of plausible downside scenarios on our overall activities, obviously, including trade. But just to add on trade, number one, we have more than 5,000 trade specialists in 50 -- more than 50 markets. We're in a unique position to be able to support our customers with our expertise and trade, as the business environment shifts, the business outlook shifts, their trading pattern shifts and they -- our customers need to reconfigure some of their supply chains. And we expect to be able to deepen our relationships with existing clients, but also thanks to our strength, stability and expertise to attract more clients and to continue building market share in the trade business, among other of the kind of robust business proposition and service proposition we have for our customers. Pam?

Manveen Pam Kaur
Group CFO & Executive Director

Yes. Thanks, Joseph, for the question. So firstly, broadly in terms of contact setting, every quarter, we do a range of scenario analysis. This quarter, we looked at the significant but plausible downside scenario resulting from increase in tariffs. We honed in on one scenario after looking at a range of possible outcomes, which we, as know, are uncertain and remain very wide. So the specific scenario, which we honed into was based on significant increase in tariffs as well as retaliatory tariffs.

We also took a holistic approach. We considered different businesses, different geographies as well as customer segments. And this scenario resulted in significant decline in trade and significant slowdown in global GDP growth. The impact of this, we looked at both in terms of revenue through lower balances, but also on flow-based income. In addition, just like we took a reserve of \$150 million in this quarter from a downside scenario, we further looked at the downside scenario on a 100% probability basis and came up with a number, which is the \$0.5 billion provision best estimate in terms of the tariffs.

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

Then with regards your new-to-bank customers in Hong Kong, we were pleased to announce that we acquired 300,000 new-to-bank customers in Q1. This is after we acquired 800,000 new-to-bank customers in the full year 2024, and we continue to see that trend ongoing. Thank you very much, Joseph.

Operator

Our next question today comes from Kunpeng Ma at China Securities.

Kunpeng Ma
China Securities Co., Ltd., Research Division

This is Kunpeng Ma from China Securities. I have two questions. First is also some follow-ups on the possible downside trade scenario. If we compare the -- you have two scenario tests, one for trade, one for ECL but -- and we got your set of assumptions for

those ECL tests from your annual report. So if we compare those two tests, other assumptions for the trade test, better or worse, than the -- I mean, the downside scenario better or worse than those set of assumptions used in the ECL test.

And also is the low single-digit revenue impact, just for some 1-year revenue or for every year's revenue thereafter. Yes. That's the first question. The second question is, could you please give us some color on the latest trend on Hong Kong CRE?

Georges Bahjat Elhedery

CEO, Member of the Group Management Board & Executive Director

Thank you very much, Kunpeng. I'm going to ask Pam to address both your questions, Kunpeng.

Manveen Pam Kaur

Group CFO & Executive Director

Thanks, Kunpeng. So we're not going to get into the detail, but the underpinned -- underpinning of the scenarios, whether it's ECLs or indeed on revenue has the same starting point. And we are comfortable based on the work we have done to reaffirm our guidance on RoTE.

I just want to be clear that the scenario does not include the secondary impact of any change in policy rates in terms of the revenue-related scenario. Secondly, none of these two scenarios have what you call an extreme downside to scenario with like a double-digit contraction of GDP like we saw in the COVID period. So just to give you some guardrails.

So in terms of Hong Kong CRE, this was a relatively quiet quarter. We did have one specific name, which in the performing book, there was a credit downgrade. Otherwise, there's really nothing more significant. We continue to look at our book in detail, and there may be a few names up or down on the credit curve with very modest impact on RWAs, but no significant impact on ECLs.

Operator

Our next question today comes from Aman Rakkar at Barclays.

Amandeep Singh Rakkar

Barclays Bank PLC, Research Division

Thanks very much for the various updates and sensitivities that you've given us. I had two questions just around customer behavior. So I just wondered if you had observed any material shift in the way that your customers are transacting with you. If you've seen any forward indicators around sentiment, any signs of derisking or deleveraging? Any shift in particularly your kind of corporate customers that might be on the receiving end of trade tariffs? Any insights there would be really helpful.

And then, the second is definitely get the message around continuing to execute on the existing strategy? I guess just two kind of related point to that, one around capital returns. I mean, it's obviously great that you've announced a \$3 billion buyback. You're talking about a more subdued outlook for lending by extension RWA. So presumably, you might be quite capital generative this year. So it seems like you're committed to distributions despite the uncertainty, right? It's an uncertain backdrop, but the pace of distributions that you're kind of executing on it, it feels like you're committed to that. Is that the right reach? Should we be confident around things like the buyback sustainability from here?

And just the related part of that question then is just around you talk about divestiture on track, the \$1.5 billion, but in terms of the redeploy, because I think you talked about some potential revenue opportunities from the redeploy or cost savings if it doesn't come through. Are you minded to delay any of this redeploy basically given the volatile backdrop?

Georges Bahjat Elhedery

CEO, Member of the Group Management Board & Executive Director

Very good. Thank you very much, Aman. I'm going to take your first question about customer behavior, and I'll ask them to address both our capital return strategy as well as the cost redeployment from the reallocations. So in terms of customer behavior, I think nothing that would really surprise you. Corporate customers essentially are in a wait-and-see mode. So some of the CapEx or large investments are on hold. Certainly, some of the shipments from China specifically to the U.S. have slowed down, but we've seen no panic. So there's been no significant drawdowns. There is -- deposit behavior has remained normal. So nothing really to call out beyond the wait and see.

In terms of personal banking and wealth customers activity. Actually, this has been quite strong. And remember, we have a diversified product offering. So we've seen customers rebalance their investments between various offerings and be it various geographic equity

exposure or other assets such as mutual funds or structured products. And when customers want to take a risk of approach, we see the money flow into our deposit base, so we kind of capture the customer assets either in invested assets or in deposits. But when we look at our NNIA for the first 3 months of the year, it remained positive, strong. So we remain positive on the outlook of the growth in this business.

Remember also, we're investing in this business. So we're capturing the underlying growth in the market, but we're also capturing market share in the way we're embedding in this business. Pam?

Manveen Pam Kaur
Group CFO & Executive Director

Thanks, Aman. So just one point to add on the Wealth customer behaviors. Our strength relies in our very broad product proposition. So as we see the mix shift between U.S. equities or Asian equities, or indeed into short-term fixed income products. We are there to support our customers as well as in terms of insurance, on more protection and savings related products. So given that gives us confidence that this double-digit growth continues. And we've seen the same trend even through April and the same trend also no panic, no drawdowns and deposit behavior normal through April. So that's just to say that.

Coming down to distribution. So just as a starting point, we have a policy on ordinary dividends. I'm assuming your question is much more on share buybacks. But let me see overall the process we follow. Every quarter, we look at where we are in terms of a CET1. And you know our CET1 operating range is between 14% to 14.5%. We also look at our capital generation, less the capital needs or capital deployment that we want to do. And what's very important is routinely, we look at a range of scenarios in terms of the macroeconomic environment. And then based on that, we look at the quantum on share buybacks. And clearly, if we have excess capital, share buybacks continues to be our preferred method to return capital.

We have not changed our view on capital redeployment. But as I've said, we look at opportunities. We look at the generator capability quarter-on-quarter, and that's how we make the decision on the quantum of share buybacks.

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

And on the redeployment of cost?

Manveen Pam Kaur
Group CFO & Executive Director

Yes, on the deployment of cost, absolutely. So far, we have not made any change to the timeline of what we said we would do. That redeployment is going to be through the midterm period, so between '25, '26 and '27. Clearly, in terms of the macroeconomic uncertainty, we are very mindful in this current environment that there may be some delays. But overall, it doesn't shift the trajectory or indeed the transactions that we have both announced and are working on, they are progressing as we expected.

Operator

Next question comes from Jason Napier at UBS.

Jason Clive Napier
UBS Investment Bank, Research Division

Can you hear me okay?

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

We can hear you, Jason.

Jason Clive Napier
UBS Investment Bank, Research Division

Perfect. So two questions, please. The first, Georges, HSBC is a signatory to a letter suggesting to the U.K. regulators that ring-fencing is something that you go on. I think, that's the right view. But we've got a lot of investor demand for sense from the U.S. to the motivation for that? What is it that you'd say in terms of OpEx, funding costs and what restructuring charges may go with that? So when you made that motivation, what was the next behind it?

And then secondly, very strong performance in costs in Q1, but guidance held constant for the year ahead. I guess that implies potentially some slippage in efficiency ratios in the quarters to come, notwithstanding the cost saving actions that are underway. Could you talk a little bit about sort of the moving parts? Is it just quarter-to-quarter volatility? Is there anything we should be thinking about in the upcoming quarters as far as cost inflation that is concerned.

Georges Bahjat Elhedery

CEO, Member of the Group Management Board & Executive Director

Thank you, Jason. Let me address your first question on ring-fencing, and Pam will take your second question on the cost. So our view on ring-fencing is that we've taken major -- I mean, there's been major enhancement to the prudential regulations for banks in the U.K. in particular, the broader regimes of capital, of loss absorbency through MREL, liquidity, recovery and resolution, et cetera. All these measures have basically put the bank in a much better safer prudential space that have made ring-fencing effectively redundant.

The second thing to say is that the U.K. is the only major economy that is applied ring-fencing. So it's quite unique to the U.K. So as an outcome, it's increased the cost to operate as a bank. It created capital inefficiencies, it trapped liquidity, it effectively exposed our customers, including businesses and SMEs to higher costs. It did somewhat also stifle competition. The bar to be able to compete in the U.K. for banks has become stiffer and more difficult. So therefore, we believe that removing ring-fencing or at least scaling back on some of the ring-fencing considerations will improve the outcome for customers and ultimately, therefore, will support growth in the U.K.

Now just to reiterate, we are very supportive of the government's growth agenda, and we will play our role in the U.K. for that. And as regard to the financial impact of the removal or the scaling down of ring-fencing, look, we haven't done full analysis, but we believe this will be positive for both capital cost and ability to compete and support the growth of the U.K. economy and our customers. Pam?

Manveen Pam Kaur

Group CFO & Executive Director

Yes. Thanks, Jason. So firstly, we managed cost to a full year number. And quarter-on-quarter, you can see some volatility. But just to clarify, our full year 2025 guidance of plus 3% is on a base of \$31.9 billion, which is the full year '24, restated to the average FX for Q1 '25. So just unbundling that, the 3%, the dependencies on the 4% inflation, investment spend and the benefit of \$0.3 billion so the 1% from the P&L sales from the simplification as we guided on the Q4. And the actions that are going to realize that \$300 million in the year have been already broadly taken, so the P&L will come through in subsequent months.

Operator

Our next question today comes from Kian Abouhossein from JPMorgan.

Kian Abouhossein

JPMorgan Chase & Co, Research Division

Great results, but clearly, the focus is on the new tariff world. And I want to try to understand, first of all, your target and guidance around interest rates, in particular, but also GDP assumptions. You mentioned mid-April, but clearly a lot happened in April. So I'm just trying to understand what date or what week we should use as a guidance in terms of interest rate assumption, if you could give maybe GDP assumptions?

And secondly, coming to your sensitivities or your analysis around tariff impact, if you could discuss, again, interest rate assumptions, in particular in GDP, but also your assumptions about China as a trading counterparty in terms of your revenues versus the corridors we talk about, because clearly, really in the new world, the corridor seem to be impacted as well. So are you assuming corridors can grow? Or do you assume corridors would also be negatively impacted in a new tariff world? And lastly, in that context, can you just talk about cost flexibility as you didn't discuss it?

Georges Bahjat Elhedery

CEO, Member of the Group Management Board & Executive Director

Thank you, Kian. Kian, I'm going to make some broad comments on the view of corridors and overall our business. And I'll ask Pam to give you additional information on the tariff scenarios as well as in the cost implications, okay? So a couple of things to note. The first one is as we did say, the lion's share of our banking NII is driven by our deposit franchise. This deposit franchise is a hallmark of our balance sheet. We run 50s loan-to-deposit ratio in three of our four businesses. And in the U.K., we run 80s, which is the lowest. Therefore, we have deposit surpluses in every currency, every geography, every business line, and this franchise is very robust and is a driver of a very important lion's share of our banking NII, very important revenue stream.

The second, when you look at our fee income, when -- so far has continued to grow at double-digit returns, and we do expect it to continue to grow at double-digit returns in the medium term, given the underlying market opportunities and market growth as well as our own investment to continue gaining market share. So transaction banking is the one we really are diving into. Remember, first, transaction banking is a wide set of products that cover various areas outside trade. And remember, a lot of our businesses, let's say, with multinational customers operating in Asia or in China, a lot of their business is in China for China or in Asia for Asia, where they produce and manufacture locally and distribute locally with limited impact on tariffs, albeit some may be impacted by tariffs.

But even within trade, we have seen growth of trade corridors intra-Asia or within Asia, Middle East at a very fast pace. And a number of these corridors have become structurally resilient and on a growth trajectory. Now some of the China Plus One trade patterns that are still meant to ultimately distribute or export to the U.S. will be affected for insofar that there's intra-Asia trade laws for that ultimate purpose. But there is a much bigger Intra-Asia -- Intra-Asia and Middle East trade flows that are 2-way and that are related to domestic manufacturing for the purposes of domestic consumption, which we continue to see as structurally growing.

Our scenarios have really looked at differentiation between the areas of structural growth and the areas that will be widely impacted by tariffs, which Pam can talk to.

Manveen Pam Kaur
Group CFO & Executive Director

So thank you, Kian. So firstly, just to reiterate, the \$40 billion banking NII continues to be our best estimate for full year 2025. Now we've looked at a range of reasonable upside, downside assumptions, including rates, but we are not immune to all scenarios despite the stress work that we have done. Our Q1 run rate of \$10.6 billion puts us on a good trajectory given that range of scenarios you've looked at all plausible upsides and downsides.

Now as always, there are four key drivers. The rates that we have included are based on the mid-April curves. The structural hedge will be a tailwind to this headwind of rates. We have \$75 billion maturities in the remainder of the year, and they are on 2.8% yield at the moment. So there will be an upside to that.

The other two elements are harder to forecast, particularly in terms of balance sheet growth, as we've said before, and the loans stay muted. Having said that, loans and advances were slightly up in the first quarter of this year, primarily because Hong Kong loans and advances were stable compared to Q4 last year where they had contracted. Now the deposit migration trend from Hong Kong has stayed stable over last year into this year at 39%, and that is continuing even through April. So if I look at it in the round in terms of deposit behaviors of our customers, both from a corporate side and as well as from a retail side, we stay quite comfortable.

So on tariffs, just in terms of the broad piece, what we have looked at from a tariff perspective is, and it's all in terms of seeing the various scenarios in terms of delivering the mid-teens RoTE. I mean, firstly, we looked at our income stream beyond banking NII, which is wholesale transaction banking. And it has many more products beyond trade finance. It also is in diverse products within trade finance and their diverse global and intra-regional corridors. Now when we have looked to the downside scenario, we've looked at higher tariffs. We have looked at impact on GDP. And we have looked more broadly on policy rates, inflation, the big picture.

But again, to say we have not looked at GDP to the stress level of a downside 2 scenario that we have called out in our release, which is like a double-digit contraction of GDP as we saw in the COVID period. So if you look at all that, we come to a low single-digit percentage impact on revenues. And within that and within the incremental \$500 million ECLs, we stay very confident for our mid-teens RoTE for the next 3 years.

Now the broader impacts are going to be hard to quantify. These are your second, third order impacts, but we'll continue to monitor them through our various scenarios and review them quarter-on-quarter. On costs, our cost trajectory is on track. And given this, there's no shift on that. And we will still continue through our envelope to be able to invest in the areas which we have been, as Georges has said, because we can see the direct benefit coming very quickly in those areas even in the current environment and continuing through April, and that's primarily on the well side.

Operator

Our next question today comes from Amit Goel at Mediobanca.

Amit Goel
Mediobanca - Banca di credito finanziario S.p.A., Research Division

Potentially follow-up, actually, to Kian's question. But -- so essentially, the plausible tariff downside scenario is pretty slow closer to the ECL downside 1 rather than the downside 2 type case. Again, just coming back in terms of the broader profitability mid-teens kind

of target. So essentially, you're saying that if we were to see that plausible downside scenario, you still believe you can achieve that mid-teens profitability level and that's before factoring in any further kind of cost actions. Or would that be with any kind of rejigging or additional cost action taken by the group to mitigate some of that impact?

And then secondly, I just wanted to check, when I look at the downside 1 ECL scenario now versus a full year, it seems like the China and Hong Kong drawdown is not quite as severe. I see the U.S. is maybe a little bit 30 bps more severe. So I was also just curious why that downside scenario is not quite as negative perhaps as what you assessed at the full year stage?

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

Okay. Thank you, Amit. Amit, on your first -- so I'm going to ask Pam to comment on your second question. But on your first question, look, we're not going to give more details than what we shared. But I think your analogy to say that it's a downside 1 like scenario in the sense that it is adverse, but plausible is correct. And within that scenario, without additional cost actions than the one that we have set out to do and are on track for doing and obviously committed to do. We are confident we can achieve our targets, in particular, our targets of mid-teen returns for '25, '26 and '27. Pam?

Manveen Pam Kaur
Group CFO & Executive Director

Thanks. So just in terms of the scenarios to confirm, they are not identical scenarios, but in terms of severity and plausibility, you're right in the ballpark, because the ECL scenario stresses a lot of things on interest rates, inflation, et cetera, from a range of factors, and this one on tariffs is quite specific on the revenue line. And to clarify on ECLs, we had to build our reserve for this quarter, change the weightings of the downside 1 from 15% to 30%. And when we look at the \$500 million potential impact, that is, if you change that downside 1 scenario weighting to 100%. So just to say that's a \$500 million additional to the \$150 million.

Now in terms of Hong Kong and China CRE, absolutely, in terms of both from an individual customer level as well on the forward economic guidance, given the starting point, there is a lesser impact, and overall there has been very little noise from a Hong Kong CRE and China CRE other than isolated names in this quarter. There can be credit downgrades over a period of time. I saw a few now, but the impact from an RWA perspective is very modest. If you look from a U.S. perspective, also there was a specific name. And when we look at the credit downgrades, so that's also in the quarter. I wouldn't really build any trend from this quarter into a full year. And all these factors, bottom line are part of the scenario analysis, which we do on upside and downside before we reaffirm our RoTE guidance target.

Operator

Our next question today comes from Gurpreet Singh Sahi from Goldman Sachs.

Gurpreet Singh Sahi
Goldman Sachs Group, Inc., Research Division

So really on banking NII, a couple, if I may, please. First is Q-on-Q. Banking NII held up pretty much flat, whereas interest rates would have added a headwind of, as per my calculation, \$170 million. So can you please double quick and tell us on how much was the benefit from the deposit pass-through being not that high and then improved asset mix and then the hedge -- structural hedge. That's one.

And second, in the \$42 billion -- again, on banking NII \$42 billion -- around \$42 billion guidance, how much are we assuming for average interest-earning assets growth? Because that has -- if I see deposit growth has been consistent, but that somehow on a Y-o-Y basis is now showing up as 4% growth. But then Q-on-Q, there is no growth and previously on Y-o-Y also, we could not show any growth? And then, what is the around? Is \$41.5 billion outcome around \$42 billion. Does that tick the box and help us meet the target?

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

I am going to ask Pam to address both of your questions on banking NII.

Manveen Pam Kaur
Group CFO & Executive Director

Thank you, Gurpreet. So firstly, banking NII was flat on a quarter-on-quarter on a constant currency basis, excluding notable items in Argentina. Now we don't split out the dollar impact of every moving part, but let me just unbundle. So the headwinds were to fewer

days in the quarter as well as lower interest rates. But the tailwinds was reinvestment of maturing hedge assets at high yields, a bit of change in the mix of our market treasury assets as well as the benefit of deposit pass-throughs, particularly in the U.K., which come through with a delay of 90 days so the interest rate cuts, which we saw in August came in through for a full quarter in this quarter. And then, we saw a bit of a tail of the November cuts as well. So that's how is the impact there?

In terms of your other question, of course, we look at various upside and downsides in that \$42 billion. And I just want to reiterate, that \$42 billion is not an underpin, it is just around \$42 billion. Our current best estimate based upon what we see in terms of deposit betas, based upon what we see in terms of actual deposit flows coming through updated, not just for the quarter but also considering the trend we've seen through April.

Operator

Our next question today comes from Andrew Coombs at Citigroup.

Andrew Philip Coombs
Citigroup Inc. Exchange Research

If I could have a couple on the organizational simplification and then also just one clarification on well. On the organizational simplification, you previously guided to \$1.8 billion of restructuring costs. And you said the majority of that is expected to be booked in 2025. I think you only took \$141 million in Q1. So presumably, we should expect a big step-up in the restructuring charges from Q2 onwards to the rest of the year? And then the second question kind of attached to this is, you said that the actions taken to date will already translate into \$300 million of annualized savings.

I appreciate in Q1, you've had very little of that. But nonetheless, you're still guiding to \$300 million for the full year '25 when you've already achieved \$300 million annualized and there's presumably more to come over the remainder of the year with the additional restructuring. So can you just clarify it now on why more of the savings not flowing into full year '25 compared to '26? And then, on Wealth clarification, given the new segmental split, is it possible to get the split of the Asian invested assets and \$16 billion Asian net new invested assets this quarter that's attributable to Hong Kong?

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

Okay. Thank you, Andrew. Andrew, I'm going to ask Pam to address your -- the first two questions with regard to the organization simplification. Just saying that we will give -- as I said earlier, we will give a more thorough update at the interim results. And on your final question, let us take it forward and see what we can communicate. \$16 billion of net new invested assets in Asia with the majority in Hong Kong, but we will take it forward to see what additional granularity we're likely to share. Pam?

Manveen Pam Kaur
Group CFO & Executive Director

Okay. Thanks, Andy. So firstly, in terms of the actions taken and the P&L being coming through for the year. The actions taken typically is when you have colleagues put through at risk and decisions made, communicated. There is always a time lag typically between that and colleagues leaving the platform. Typically, it tends to be about 1/4, 90 days. So when you say an action has been taken, you know it saving is going to come through, but there is going to be a time lag between that decision and the savings feeding into the P&L. So when we said the majority of the actions have already been taken, the annualized savings that we calculated, it's for the full year.

So it's not as though these actions are already banked in and there's going to be further. So that's sort of the main piece. Now on restructuring costs, you're absolutely right that there is going to be the majority of the restructuring costs taken in 2025 rather than 2026. And I would expect most of that to come through Q2, Q3 and then some Q4 and then tapering down as we go into 2026.

Operator

Our next question today comes from Ed Firth at KBW.

Edward Hugo Anson Firth
Keefe, Bruyette, & Woods, Inc., Research Division

I just had a couple. The first one, I noticed that your cost guidance is based on an average exchange rate in Q1. But the U.S. dollar, I think, is what off about 6% since then. So I assume that if we were actually to do that at today's exchange rate, your cost number will be somewhat higher than that. And I'm just trying to check, is your revenue guidance also based on those exchange rates? So should

-- is it effectively like both where we should both gear up both revenue and costs for the weaker dollar in terms of our expectations? That's the first point. And then, I guess you are partly related to that. Are we actually in the plausible downside scenario now?

I mean, if I'm looking at trade flows from China to the U.S. are down, what, 45% bookings, something like that. I mean, that feels to me like a pretty downside scenario. So should we assume that as we go through Q2 and Q3, we are actually in that scenario now. Is that effectively where we are, assuming nothing changes. And I guess nobody has any idea what will happen in terms of the changes, but assuming we stay where we are today.

And then, I guess my second question was just about BoCom. I just can't really understand the accounting, because you're still running with a valuation that's what, \$10 billion above the market value, but you didn't subscribe for new shares with the capital raise, which I sort of assume you would have done if you had thought it really was worth that much more.

So should we be expecting you to actually track that now down to what would be like a market price rather than just the \$1.6 billion, should we be revisiting how you do the sort of -- I think, you call it value in new stone, something like that?

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

Thank you very much, Ed. Let me take your plausible downside scenario. And I'll ask Pam to address your cost -- the cost question as well as the BoCom accounting question. So look, the adverse plausible downside scenario is a scenario that is further adverse from where we are today with significantly higher global tariffs on major trading blocks on an aggregate basis. And we've looked at their impact across, obviously, our trade business, but more importantly, across overall, our volumes and the economic outlook of our businesses on the whole. We do recognize that there is uncertainty, and it's very difficult to understand how much downside or upside there is in the future outlook for this.

But we believe this plausible downside scenario is not the expected scenario as in it is a lower probability downside than the expected scenario. Pam?

Manveen Pam Kaur
Group CFO & Executive Director

Yes. Thank you, Ed. So I agree the downside scenario is not something where we are now, because the downside scenario clearly has a broader impact in terms of GDP and other areas, which then gives the significant impacts that we talked about, just to make that clear. And you're absolutely right, the target cost base of \$31.9 billion, equivalent to full year '24 costs was rebased on first quarter's average exchange rates, all things being equal, U.S. depreciation would put an upward pressure on an absolute cost but in the same way, it will put an upward pressure, it have some benefit on the revenues, and we will do that on the same principle quarter-on-quarter as we progress.

FX rates have been volatile. We'll continue to update you quarter-on-quarter. So in terms of BoCom, just in sort of simple terms, at this point of time, we continue to say that BoCom is an associate. We have done the assessment as we do every year in terms of further impairment. And there has been no impact for this quarter. The dilution impact into P&L, we will have an accounting impact on the completion of the share issuance, and that's where that will be taken. But I just want to reiterate all said and done. There is an insignificant impact from this dilution on our CET1. And because it's a material notable item, there is no impact on dividend or distribution.

Edward Hugo Anson Firth
Keefe, Bruyette, & Woods, Inc., Research Division

Yes, sorry about that. No, I just -- I don't understand the logic why you didn't subscribe for this -- for more capital in the sense that if it is worth that much more, it would seem to me that, it was an opportunity to put more capital in and to value the -- to get the upside in due course.

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

So Ed, the -- there was -- the share issuance was subscribed by government or government-related entities in China. We were happy with our holding as it is. And therefore, we're happy with the outcome. And with regards to the actual accounting value, probably kind of point you to the Investor Relations team, which can take you through some of the specificities of this equity accounting principles, which are quite unique in the way we treat the associate accounting of BoCom. But I just want to reemphasize, we're happy with our

holding in BoCom. We're happy with our strategic relationship with BoCom and the fact that they give us exposure to the domestic economy in China, be it Retail, SME outlook, which is not something our organic business is involved in.

And very importantly, what Pam said, the valuation in our NAV is deducted from CET1, which means these impairments do not have -- or have a very minimal second order impact on our CET1 ratio and therefore, also do not impact our distribution capability.

Manveen Pam Kaur
Group CFO & Executive Director

And Ed, very happy to offline go through with you on the equity accounting treatment and the rest in detail, if you so wish.

Operator

Your next question today comes from Katherine Lei at JPMorgan.

Katherine L. Lei
JPMorgan Chase & Co, Research Division

I have two questions. The first one I still want to ask about the tariff scenario, because I think for analysts, at least investors in this part of the world, I think it's partly -- it's widely expected that the Chinese government will have more stimulus policy because of the tariffs. So in your downside scenario analysis, have you incorporated some of the positive impact from the stimulus policies, which could potentially be benefiting the Hong Kong China market. So I think this is number one.

Number two, I still want to ask about the loan growth because now the guidance is that there will be muted loan demand in 2025. So what sort of tariff scenarios that we are -- like when we're giving this type of guidance, what sort of tariff environments are we incorporating? And also that is there any guidance on, say, for example, like deposit growth and also banking asset or interest-generating asset growth? Like how should we look at this whole thing?

Georges Bahjat Elhedery
CEO, Member of the Group Management Board & Executive Director

Thank you Katherine. Katherine, I'm going to make some comments on your first question, and I'll ask Pam then to take it forward as well as the loan growth question, which gives you an overlook. So firstly, we recognize indeed, there is a lot of potential for China to take policy measures and other measures to stimulate the economy, and we would be very encouraged by that. We're confident about the outlook for China. We're optimistic that these measures as they are taken and they will be taken will have a positive impact on the economy. We believe in the foundational strength of the Chinese economy, and we're very encouraged to see the pickup in the retail sales, and therefore, the pickup in domestic consumption also.

So on the whole, our main scenario is that we are confident in the medium- to long-term outlook in China. This being said, in a plausible adverse downside scenario, we have not taken into account some of these potential positive impacts, which may be or not likely to come. Pam?

Manveen Pam Kaur
Group CFO & Executive Director

Yes. Thanks, Katherine. So absolutely being a stress downside scenario plausible, but severe, we typically take the downside. We don't take the upside of the mitigating actions or any other policy measures. It's purely tariffs and evaluatory tariffs in a plausible range. So all said and done, I just want to reaffirm, it was all calculated as part of the target RoTE guidance that we are giving.

On loan growth, the situation is in some ways similar to where we were at the end of Q4, because macroeconomic uncertainty delays decision-making. So we are not seeing any of those CapEx decisions being brought forward or delayed. They were delayed. They will continue to be delayed hopefully at some stage when some certainty remains, there will be loan growth. We are also monitoring very closely to see if there is any increase in drawdowns just like we observed in Q2 of 2020.

At this point of time, there's no increase in drawdowns. So overall, from a loan growth perspective, I would say, still muted in terms of what we are seeing. The only thing I would say is that, if there is sort of continued tariff uncertainty, you will see maybe a little bit pickup from a OpEx perspective on working capital, because when you have to pay import duties upfront and there's some delays in some of the monies coming and so on. So that's kind of will have an impact.

But from a materiality perspective, the real driver for our banking NII guidance of \$42 billion is really deposits for which we have a very strong franchise. We are in a privileged position to be a trusted partner for our customers, and we expect that to grow. Of course, there will be a bit of seasonal fluctuation quarter-on-quarter. But overall, that trend has continued.

Operator

Our final question today comes from [Ian Zhou Yu] from CICC.

Unknown Analyst

My question is also about tariffs. Could you please give an example of how our major clients react to tariff policy in April? Are they facing a sharp decline in business demand? Or are they actively seeking the solutions to reduce the effect of tariffs or just cut their business? And how HSBC help them navigate through the challenge from tariffs. And beyond risks, have we seen any new business opportunities for HSBC in this context?

Georges Bahjat Elhedery

CEO, Member of the Group Management Board & Executive Director

Thank you very much, Ian, for your questions. So yes, indeed, customer -- I mean, look, first, the customers aren't taking any decisions in panic, customers essentially are in wait and see mode. Number of CapEx or large investments have been slowed down and certainly trade between China and the U.S., we've seen a major slowdown. But on the whole, customers are looking at their business models. They are looking at their supply chains. They're looking at ways to create more resilience in their business. And we're definitely here to help them.

As I said earlier, we are our customers' trusted banking partner. They trust the strength of our financial strength, the strength of our balance sheet and our proposition. They trust the stability of our commitments to support them through their needs and through all predictable and unpredictable times.

And very importantly, they trust our expertise. We have more than 5,000 trade experts in more than 50 jurisdictions, working with clients to help them think through what this means for their business model and now how they can help them adapt and adjust and create resilience. So therefore, in an environment like this one, we expect to deepen relationships with clients. We expect to acquire new clients and to consolidate our position as a leading trade bank and we expect to make, hopefully, a difference for our customers in navigating these uncertainties. Thank you very much, Ian.

I think we have addressed all the questions. So I want to take this opportunity to thank all of you for your questions. So looking in closing, we had a strong quarter marked by momentum in our earnings, discipline in our execution and confidence in our ability to deliver our targets.

Neil and the team are available for any follow-up questions with our Investor Relations expert. Meanwhile, Pam and I look forward to speaking with you again soon. Enjoy the rest of the day. Thank you.

Operator
