A wealth of opportunities

A trend with legs

Asian Wealth management presents a compelling opportunity for the Global UK banks. AUM is growing faster than other regions a trend we anticipate will endure as households shift from deposits to more sophisticated investments. Standard Chartered grown faster than peers in the last three years and we expect further wealth growth to fuel 19% CAGR group EPS growth in the next 3 years. We upgrade Standard Chartered to BUY with 2,400p price target and maintain HSBC at HOLD with 1,520p price target.

Asian wealth has been a brightspot

APAC financial assets have grown at a 10% CAGR over the last 8 years, outstripping Europe/America at 5-7%. The outperformance has been driven in part by balance of payments surpluses between West and East; higher nominal GDP growth; increasing relative household leverage; and higher savings ratios.

We expect it to continue

We expect household asset growth in APAC to continue to exceed Europe. Across the largest APAC countries we expect household assets to grow some \$36trn in the next 5 years, a CAGR of c.9%. Asia is substantially underinvested in investment products with most household assets sat in bank deposits. Assuming very modest mix shift and that c.9% growth translates to c.11% growth in investments and presents a multi year growth opportunity in Wealth management.

Standard Chartered has been growing fastest

10 of the largest wealth managers in Asia have seen 16% CAGR AUM growth in Asia Pacific in the last 2 years reaching a total of \$4trn. Standard Chartered is growing the fastest and we expect will continue to grow at 13% CAGR in the next 3 years. The positive outlook, however, goes beyond just our 3 years forecast horizon and we now factor in a growth premium to our wealth income going forward.

Where it sits relatively

Standard Chartered outperforms other UK banks on EPS growth historically and going forward. We expect 19% CAGR EPS growth in the next 3 years. Standard Chartered lags domestic banks on revenue growth and value creation but it will catch up by 2028 and the long term growth footprint should not be undervalued.

IMPORTANT RESEARCH DISCLOSURES AND ANALYST CERTIFICATIONS LOCATED IN APPENDIX 1. Deutsche Bank does and seeks to do business with companies covered in its research reports. Thus, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

West v East disparity

Asian household financial asset growth has outstripped Western growth. In the last 12 years, household financial assets in China have grown at a 9% CAGR; South Korea at 10%; Singapore and Taiwan at 7%. At the same time UK financial asset growth CAGR has been just 2%; the Euro area at 6% and with the US a more laudable 6%.

Figure 1: Household financial asset growth in APAC far exceeds rates in the West

Source : Central bank data

The faster build in financial assets is generally driven by higher GDP growth in emerging economies. APAC and the middle east run substantial balance of payments surpluses. There is an influx of capital into APAC generally from western countries which continues to drive financial assets and household wealth higher. Nominal GDP growth trends going forward have partially converged, though this is explained by inflation more than it is real growth. The dichotomy of western trade deficits and Asian trade surplus should continue into the foreseeable future.

Figure 2: Current account balances as % of GDP shows flow of assets from West to East

Source : Bloomberg Financial LP, DBE

Figure 3: Nominal GDP growth in Asia exceed Western growth rates

Source : Bloomberg Financial LP, DBE

Over the last 20 years there has been a convergence of debt ratios between West and East. In the run up to the financial crisis in 2009 UK and US household debt to GDP hit peak levels. Since then leverage has progressively declined. By contrast there has been a slow build of financial leverage within Asian economies. There is less relative scope for increasing leverage in Asia now over UK/US

Figure 4: Household Debt to GDP ratios have converged over the last 20 years

Source : Bloomberg Finance LP

Asia has much higher savings ratios than US/UK. China, India, Singapore household savings are c.30% of disposable income, and disposable income have grown faster in these countries. The majority of savings flows into deposits in stark contrast to North America and Western Europe where the majority of savings are held in securities and other financial instruments.

Figure 5: Household savings ratios in Asia far exceed those in UK/US

Source : Central Bank data

Figure 6: Savings are sitting mostly in deposits in Asia and more investments in US/UK

Source : Central Bank data

At current savings rates we can extrapolate the growth in household assets by country over the next 5 years.

Across the largest APAC countries we expect \$36trn in household assets in the next 5 years, a CAGR of c.9%. In comparison we expect c.\$75bn growth in Europe and US, a CAGR of 6%.

The structural lack of diversity in household assets in APAC means the growth rate of investment products should grow faster than total assets. With very modest mix shift taken into account, we expect 11% growth in APAC compared to 7% in Europe/US. In absolute terms that is potential flows to investment products of \$100trn. The scope for growth in Wealth management in Asia is much greater than that of US/Europe.

The greatest single opportunity in Asia by pure size is China. The build up in deposits in China is driven by very high savings rates. This build up has been driven by government intervention in particular currency controls. A consistently high current account surplus has led to an accumulation of assets in China which historically have been difficult to extricate. China's economic model uses current account surpluses and capital controls which has built a massive domestic savings pool that funded its investment-led growth, leading to a substantial, if somewhat captive, accumulation of household financial assets.

Figure 7: Asian growth in financial assets and investments should substantially exceed US/Europe

Chinese liberalisation

China has been slowly and progressively engaging with international financial markets. Across the last three Five Year Plans in China, the language around internationalisation has evolved meaningfully, shifting from outward expansion to a more balanced and controlled form of global engagement.

- The 13th 5 Year Plan (2016–2020) placed strong emphasis on “opening up” and deeper integration into global economic systems, highlighting goals such as promoting the Belt and Road Initiative, playing a more active role in global economic governance, and taking on greater international responsibilities. This framing reflects a period in which China was focused on expanding its global footprint and embedding itself more deeply in international trade and investment.
- The 14th 5 year plan (2021–2025) centres on the concept of “domestic international dual circulation,” signalling that global engagement should be balanced with a stronger domestic economic base and greater resilience to external shocks.
- The 15th Plan (2026-2030), language shifts toward “high level opening up,” “two way investment,” and more selective, managed forms of global integration. China continues to pursue inward liberalisation, including further reductions in the negative list for foreign investment and targeted opening of services sectors, reinforcing a two way opening framework.

Taken together, the progression in language suggests that China is moving toward a model that emphasises quality, control, and strategic alignment in its cross border economic engagement, which is consistent with tighter regulatory control on outbound investment announced recently.

Easing of cross border flows

There are multiple channels through which Chinese residents can access offshore assets. Over the past decade, authorities have incrementally expanded these channels, although this has been targeted liberalisation rather than full capital account opening, and significant restrictions remain in place.

At the individual level, there remains an annual USD 50,000 foreign exchange conversion limit, in place since 2007 (previously USD 20,000). This quota is intended for current account purposes (e.g. travel, education, consumption) rather than capital account investment.

Institutional access is primarily provided via the Qualified Domestic Institutional Investor (QDII) scheme, which allows approved institutions to invest in overseas securities, including equities, bonds, and funds. This operates via a quota system, with total quotas currently in the region of USD 170bn+, although utilisation varies over time.

Cross-border investment channels have also expanded via the various “Connect” schemes:

- **Stock Connect** (launched 2014) allows Mainland investors to access Hong Kong equities and ETFs via domestic brokerage accounts, within defined quotas.
- **Wealth Management Connect** (launched 2021, expanded in 2024) enables residents in the Greater Bay Area to invest in approved wealth management products and deposits across the Hong Kong–Mainland boundary, subject to scheme-level quotas.
- **Bond Connect** was introduced on a northbound basis in 2017 (foreign investors into China) and southbound in 2021 (Mainland institutions investing into Hong Kong’s bond market).
- **Swap Connect** (launched 2023) provides institutional investors with access to cross-border interest rate derivatives markets.

Taken together, these programmes have broadened access to offshore assets, particularly for institutional investors and selected retail channels. However, the overall framework remains quota-based and tightly regulated, with capital outflows continuing to be managed within a controlled regime.

The most recent crack down...

Against this backdrop of gradual and selective liberalisation, recent regulatory developments suggest a shift in emphasis. The introduction of the April 2026 IPO proceeds repatriation rules and the June 2026 ODI Regulations does not reverse China’s opening-up agenda, but instead reflects a move toward greater state control over the direction, structure, and end-use of cross-border capital flows.

The most recent regulation on Outbound Investments and overseas share issuance are, however, more restrictive at the margin. We don’t believe these measures are a reversal of China’s broader strategy of economic opening. Rather, they reflect a shift toward greater regulatory oversight and control of cross border capital flows, particularly in areas linked to national security and financial stability.

In June 2026, the State Council issued the first unified, State Council level Regulations on Outbound Investment (ODI) (effective 1 July 2026). The reforms reframe the regime around national security, technology control, and lifecycle supervision, while expanding regulatory scope and enforcement powers. Key changes include:

- **Elevation of national security considerations:** National security is now a core feature of overseas investment regulation, with authorities able to intervene where investments may affect strategic sectors or sensitive technologies.
- **Closing of offshore structuring gaps:** The rules allow regulators to look through offshore entities and assess investments involving China origin assets, reducing the effectiveness of traditional offshore holding

structures.

- **Shift to lifecycle oversight:** The framework introduces full lifecycle supervision (from investment through to exit), with the intensity of oversight calibrated to sector sensitivity and risk.
- **Expanded capital oversight:** Monitoring of overseas investment flows and portfolios is strengthened, and the scope of regulation is extended to include individual investors.

In addition, in April 2026 China implemented new crossborder capital management rules governing overseas listings. These require, in principle, the repatriation of funds raised offshore via IPOs or secondary offerings, with offshore retention subject to explicit regulatory approval.

Wealth Management market shares

10 of the largest wealth managers in Asia have seen 16% CAGR AUM growth in Asia Pacific in the last 2 years reaching a total of \$4trn.

HSBC has the largest share of Asian Wealth balances at c.\$1trn. UBS ranks second at \$795bn and Standard Chartered 3rd at \$447bn. In the last 2 years in particular Standard Chartered has grown faster than peers with a 2yr CAGR of 28% compared to the group average of 18%. Part of this is due to a switch of assets from custody to AUM in 2024 which totalled c.\$40bn. Even excluding these though Standard Chartered AUM is growing at a 22% CAGR in the last two years and ranks among the highest.

Extending back 5 years shows an acceleration in wealth balances starting in 2023 with a noticeable pick up in 2025.

Figure 9: HSBC holds the number 1 spot for APAC AUM but Standard Chartered is growing fastest

Source : Company reports

Figure 10: APAC AUM started to accelerate in 2023

Source : Company reports

Net new money growth also saw a step up in 2023 though the data is even more sparse than AUM data. Standard Chartered is seeing significant NNM growth that outpaces peers leading to the market share gains. The net new money growth excludes the transfer of assets from AUC to AUM.

Figure 11: Net new money (as % opening AUM) in APAC is growing fastest at Standard Chartered

	HSBC	STAN	UBS	DBS	EFG	OCBC	Bank of China
2021		8%	5%		-1%		
2022		7%	0%	8%	1%	10%	
2023		11%	10%	8%	13%		
2024	9%	16%	3%	6%	13%	8%	
2025	8%	14%	9%	10%	10%	10%	4%

Source : Company reports

Standard Chartered expect cumulative net new money growth of \$200bn 2025 to 2028, o/w they have already seen 70bn in 2025 and Q1 2026. An additional \$130bn would be a quarterly average of \$12bn going forward- a step down from the last 5 quarters average of \$14bn.

At that implied run rate and assuming a 2%p.a. market return on AUM we would expect to see 11% growth in AUM.

Given that household assets should grow at around this rate in APAC and we would expect continued mix shift of household financial assets into wealth management products, this seems like a low estimate. And it further does not take into account the fact that Standard Chartered has been growing faster than peers in the last 2 years and could take a greater share going forward.

Our estimates assume that Standard Chartered will achieve NNM growth of \$245bn in that time frame. AUM increases by 11% on the same market return assumption. But by 2028 this will by no means be the end of the growth in wealth in the region. Double digit asset growth could continue for many years more.

Margins at Standard Chartered have been suppressed by a large mandate change in 2024. We assume small increases in margin as those assets are allocated to higher margin products.

Figure 12: Standard Chartered should grow in the teens in wealth management

Wealth Management	2024	2025	2026e	2027e	2028e	3y CAGR

as % group	13%	15%	17%	18%	20%	

Source : Company reports, DBe

Wealth management income is 15% of the group but excludes the income on deposits. However, with a 18% revenue CAGR we expect wealth management to

grow to 20% of the group.

The Wealth and retail banking division in its entirety is 60% of revenues but includes deposits mortgages and consumer loans and contains some areas that will be exited this year and drag more on revenue.

Source : Company reports, DBS

HSBC AUM growth is lower at 8% CAGR which is a combination of fast growth in Asia diluted by lower growth outside of Asia. Wealth is 14% of HSBC excluding deposit income and we expect it to rise to 16% by 2028. Wealth is different to Standard Chartered including insurance manufacturing and asset management.

Figure 14: HSBC AUM growth in high single digits going forward

Our estimates for Standard Chartered increase 3-4% in this note. Our price target however increases by 23% to 2,400p and we upgrade the stock to BUY. We have shifted our valuation methodology to sum of the parts and apply long term growth assumptions to the wealth management business to reflect the strong and ongoing market conditions going forward.

Our estimates for HSBC are broadly unchanged. We increase our price target from 1450p to 1520p and maintain our Hold recommendation. We have similarly shifted to a SOTP models and give some credit for future growth in the wealth business. But the premium valuation of HSBC compared to Standard Chartered is less attractive in our view.

Global versus Domestic

The Global banks are on a different path to the rest of the UK banks. Standard Chartered in particular. Generally we have favoured the value creation of the domestic banks through TNAV and dividends. Lloyds and Natwest excel on this metric and HSBC is in a similar camp. Standard Chartered will converge on the other UK names by 2028 but the key positive is that it will continue to improve beyond that point. The story on that basis is similar in shape to that of Barclays.

Figure 18: Value creation measured by TNAVps plus dividend growth is highest at the domestic banks. HSBC is in a similar camp but Standard Chartered builds into it over time

The reason the domestics screen better on value creation is the structural hedge tailwinds in TNAV and higher ROTES. Standard Chartered does not have the large legacy hedges that benefit the domestics going forward and ROTE has been on a gradual rebuild process. By 2028 a lot of the gap will have closed. If you believe the 2030 c.18% ROTE target set out by Standard Chartered at the recent investor day then the gap will almost entirely have closed. Again the story is similar to Barclays in shape.

Figure 19: RoTEs are higher at the domestic banks and HSBC. Standard Chartered and Barclays should both build to these levels over time

ROTE (adj)	2020	2021	2022	2023	2024	2025e	2026e	2027e	2028e

Rolling structural hedges support superior revenue growth at the domestic banks particularly in the next 2 years. Standard Chartered in the near term is still negatively impacted by prior rate cuts but with less hedge protection and there is still a drag from some business disposals. However, revenue growth will build to a premium to the other large cap UK banks by 2028. And the structural growth opportunities in Asian Wealth in particular suggest that revenue growth opportunities beyond 2028 exceed those of UK domestic businesses. HSBC in 2028 still has the drag from expected business disposals in 2027 and so on our estimates screens weaker.

Figure 21: Domestic UK banks hedges drive near term outperformance in revenue growth. But the longer term structural opportunity is greater at Standard Chartered

Standard Chartered and Barclays are much less reliant on net interest income. c.50% of revenues at both banks are derived from non interest income. We expect Standard Chartered to continue to pivot towards more non interest income over time, in contrast to Barclays which is deploying capital into UK balance sheet. Standard Chartered's non interest income growth is driven in large part by growth in Wealth management which has very low capital consumption and is valued highly by the market.

Figure 22: Standard Chartered has the highest proportion of revenue in non interest income and builds in capital light wealth management over time

Investment Thesis - HSBC

Outlook

We expect HSBC to generate returns in the next 3 years >17%. Structural hedging and volumes provide revenue growth in the next three years but curtailed by

repositioning of business units. At current valuations, HSBC trades at a premium to other UK banks. The ROTE outlook and yield are decent but with a premium valuation and limited scope for further ROTE improvement, we rate HSBC as HOLD.

Valuation

We value HSBC using a Sum of the Parts methodology on our 2028 estimates. We use a 10% cost of equity against all division excluding the investment bank where we use 12%. We factor in a 2% growth benefit to the Hong Kong and International Wealth business. Finally we discount back for a 12m forward price target.

Risks

Downside risks to our price target include: A weaker economic outlook driving interest rates lower and lifting impairments and RWAs. Upside risks include: better-than-expected margin management offsetting interest rate pressure or higher market interest rates.

Investment Thesis - Standard Chartered

Outlook

We expect high teens EPS growth at Standard Chartered over the next 3 years. Wealth management drives the majority of this growth going forward. Standard Chartered is growing faster than peers in a market which has structural long term growth drivers. There are fewer revenue drags on the group going forward and we expect revenue growth to pick up each year driving ROTE improvement to beyond 15% in 2028 with tailwinds behind the company. We rate the stock as a BUY.

Valuation

We value Standard Chartered using a Sum of the Parts methodology on our 2028 estimates. We use a 10% cost of equity against Wealth and Retail banking division; and 12% against the CIB. We factor in a 4% growth premium for the Wealth business resulting in an implied P/E of 12.6x on 2028 numbers- similar to other banks in Singapore. Finally we discount back for a 12m forward price target.

Risks

Key downside risks include a weaker economic outlook driving interest rates lower and lifting impairments and RWAs. Heightened political risk between the US and China offers some risk primarily through valuations rather than economic impact.

Equity rating dispersion and banking relationships

Equity Rating and Dispersion Key

The Equity Rating Dispersion Chart depicts the following:

The proportion of recommendations that are rated "buy", "sell" and "hold" over the previous 12 months. This is shown for securities issued in the stated region e.g. "Europe Universe". See rating definitions below. This is represented by the "Companies Covered" bars in the chart. The percentage value displayed above the bar is the proportion as a percentage. E.g. 50% above the "buy" / "Companies Covered" bar means that 50% of DB's equity research covered companies over the past 12 months have a "buy" rating.

Next to each of the three respective bars showing the proportion of "buy", "sell" and "hold" recommendations we provide two additional bars to show:

- The proportion of "buy", "sell" or "hold" recommendations where Deutsche Bank and/or Affiliates provided MIFID Investment or Ancillary Services in the past 12 months. This is represented in the "MIFID Investment and Ancillary Services" bar. The percentage value displayed above the bar shows the proportion of Companies Covered with the given rating where DB has also provided MIFID Investment and Ancillary Services in the past 12 months. E.g. 50% above the "Cos. w/ MIFID Investment and Ancillary Services" bar means 50% of the Companies Covered with the rating stated have also received MIFID Investment and Ancillary Services from DB.

- The proportion of "buy" (or "sell" or "hold") recommendations where Deutsche Bank and/or Affiliates has provided Investment Banking services in the past 12 months for which it has received compensation. The percentage value displayed above the bar shows the proportion of Companies Covered with the stated rating where DB has also provided Investment Banking services in the past 12 months. E.g. 50% above the "Cos. w/ Investment Banking relationship" bar means 50% of the Companies Covered with the rating stated also have an Investment Banking Relationship with DB.

Buy: Based on a current 12-month view of TSR, we recommend that investors buy the stock.

Sell: Based on a current 12-month view of TSR, we recommend that investors sell the stock.

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

TSR = Total Shareholder Return. Percentage change in share price from current price to projected target price plus projected dividend yield

Newly issued research recommendations and target prices supersede previously published research.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively 'Deutsche Bank'). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of those websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls on the Research Website (<https://research.db.com/Research/>), and can be found on the general coverage list and also on the covered company's page. A Catalyst Call represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties. Artificial intelligence tools may be used in the preparation of this material, including but not limited to assist in fact-finding, data analysis, pattern recognition, content drafting and editorial corrections pertaining to research material.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (<https://research.db.com/Research/>) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates - these are common in emerging markets. The index fixings may - by construction - lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited - up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the 'Characteristics and Risks of Standardized Options', at <https://www.theocc.com/company-information/documents-and-archives/options-disclosure-document>. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at <https://research.db.com/Research/> on each company's research page or under the 'Disclosures' tab. Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you or any of your agents (collectively, "You" or "Your") with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice, Deutsche Bank is not acting as your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

In July 2018, Deutsche Bank revised its rating system for short term ideas whereby the branding has been changed to Catalyst Calls ("CC") from SOLAR ideas; the rating categories for Catalyst Calls originated in the Americas region have been made consistent with the categories used by Analysts globally; and the effective time period for CCs has been reduced from a maximum of 180 days to 90 days.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA and SIPC. Analysts located outside of the United States are employed by non-US affiliates and are not registered/qualified as research analysts with FINRA.

European Economic Area (exc. United Kingdom): Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorized under German Banking Law and is subject to supervision by the European Central Bank and by BaFin, Germany's Federal Financial Supervisory Authority.

United Kingdom: Approved and/or distributed by Deutsche Bank AG acting through its London Branch at 21 Moorfields, London EC2Y 9DB. Deutsche Bank AG in the United Kingdom is authorised by the Prudential Regulation Authority and is subject to limited regulation by the Prudential Regulation Authority and Financial Conduct Authority. Details about the extent of our authorisation and regulation are available on request.

Hong Kong SAR: Distributed by Deutsche Bank AG, Hong Kong Branch except for any research content relating to futures contracts within the meaning of the Hong Kong Securities and Futures Ordinance Cap. 571. Research reports on such futures contracts are not intended for access by persons who are located, incorporated, constituted or resident in Hong Kong. The author(s) of a research report, and the entities for which they act and/or are affiliated with, may not be licensed to carry on regulated activities in Hong Kong and, if not licensed, do not hold themselves out as being able to do so. The provisions set out above in the 'Additional Information' section shall apply to the fullest extent permissible by local laws and regulations, including without limitation the Code of Conduct for Persons Licensed or Registered with the Securities and Futures Commission. This report is intended for distribution only to 'professional investors' as defined in Part 1 of Schedule of the SFO. This document must not be acted or relied on by persons who are not professional investors. Any investment or investment activity to which this document relates is only available to professional investors and will be engaged only with professional investors.

India: Prepared by Deutsche Equities India Private Limited (DEIPL) having CIN: U65990MH2002PTC137431 and registered office at 14th Floor, The Capital, C-70, G Block, Bandra Kurla Complex, Mumbai (India) 400051. Tel: + 91 22 7180 4444. It is registered by the Securities and Exchange Board of India (SEBI) as a Stock broker bearing registration no.: INZ000252437; Merchant Banker bearing SEBI Registration no.: INM000010833 and Research Analyst bearing SEBI Registration no.: INH000001741. DEIPL's Compliance / Grievance officer is Ms. Rashmi Poddar (Tel: +91 22 7180 4929 email ID: complaints.deipl@db.com). Registration granted by SEBI and certification from NISM in no way guarantee performance of DEIPL or provide any assurance of returns to investors. Investment in securities market are subject to market risks. Read all the related documents carefully before investing. DEIPL may have received administrative warnings from the SEBI for breaches of Indian regulations. Deutsche Bank and/or its affiliate(s) may have debt holdings or positions in the subject company. With regard to information on associates, please refer to the "Shareholdings" section in the Annual Report at: <https://www.db.com/ir/en/annual-reports.htm>. For latest India research audit report, refer https://country.db.com/india/deutsche-equities-india/index?language_id=1.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. 'Moody's', 'Standard Poor's', and 'Fitch' mentioned in this report are not registered credit rating agencies in Japan unless Japan or 'Nippon' is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of DSI are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI. Some of the foreign securities stated on this report are not disclosed according to the Financial Instruments and Exchange Law of Japan. Target prices set by Deutsche Bank's equity analysts are based on a 12-month forecast period.

Korea: Distributed by Deutsche Securities Korea Co.

South Africa: Deutsche Bank AG Johannesburg is incorporated in the Federal Republic of Germany (Branch Register Number in South Africa: 1998/003298/10).

Singapore: This report is issued by Deutsche Bank AG, Singapore Branch (One Raffles Quay #18-00 South Tower Singapore 048583, 65 6423 8001), which may be contacted in respect of any matters arising from, or in connection with, this report. Related financial products or services are available only to Professional Clients, as defined by the Dubai Financial Services Authority.

Australia and New Zealand: This research is intended only for 'wholesale clients' within the meaning of the Australian Corporations Act and New Zealand Financial Advisors Act, respectively. Please refer to Australia-specific research disclosures

and related information at https://www.dbresearch.com/PROD/RPS_EN-PROD/PROD000000000521304.xhtml. Where research refers to any particular financial product recipients of the research should consider any product disclosure statement, prospectus or other applicable disclosure document before making any decision about whether to acquire the product. In preparing this report, the primary analyst or an individual who assisted in the preparation of this report has likely been in contact with the company that is the subject of this research for confirmation/clarification of data, facts, statements, permission to use company-sourced material in the report, and/or site-visit attendance. Without prior approval from Research Management, analysts may not accept from current or potential Banking clients the costs of travel, accommodations, or other expenses incurred by analysts attending site visits, conferences, social events, and the like. Similarly, without prior approval from Research Management and Anti-Bribery and Corruption ("ABC") team, analysts may not accept perks or other items of value for their personal use from issuers they cover.

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request. This report may not be reproduced, distributed or published without Deutsche Bank's prior written consent.

Backtested, hypothetical or simulated performance results have inherent limitations. Unlike an actual performance record based on trading actual client portfolios, simulated results are achieved by means of the retroactive application of a backtested model itself designed with the benefit of hindsight. Taking into account historical events the backtesting of performance also differs from actual account performance because an actual investment strategy may be adjusted any time, for any reason, including a response to material, economic or market factors. The backtested performance includes hypothetical results that do not reflect the reinvestment of dividends and other earnings or the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will or is likely to achieve profits or losses similar to those shown. Alternative modeling techniques or assumptions might produce significantly different results and prove to be more appropriate. Past hypothetical backtest results are neither an indicator nor guarantee of future returns. Actual results will vary, perhaps materially, from the analysis.

The method for computing individual E,S,G and composite ESG scores set forth herein is a novel method developed by the Research department within Deutsche Bank AG, computed using a systematic approach without human intervention. Different data providers, market sectors and geographies approach ESG analysis and incorporate the findings in a variety of ways. As such, the ESG scores referred to herein may differ from equivalent ratings developed and implemented by other ESG data providers in the market and may also differ from equivalent ratings developed and implemented by other divisions within the Deutsche Bank Group. Such ESG scores also differ from other ratings and rankings that have historically been applied in research reports published by Deutsche Bank AG. Further, such ESG scores do not represent a formal or official view of Deutsche Bank AG. It should be noted that the decision to incorporate ESG factors into any investment strategy may inhibit the ability to participate in certain investment opportunities that otherwise would be consistent with your investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
