Credit Highlights

Overview

Key strengths	Key risks
Strong market position, particularly in the higher-yielding small and midsize enterprise (SME) segment.	Exposure to idiosyncratic risks in emerging markets in Southeast Asia.
Stable deposit base and strong liquidity profile.	
Record of prudent risk management.	

Falling interest rates and one-off provisions will weigh on the profitability of United Overseas Bank Ltd. (UOB). We forecast the bank will have a ratio of core earnings to average adjusted assets of 0.8%-0.9% in 2025, down from 1.14% in 2024. The ratio could recover to 1%-1.1% in 2026.

UOB's net interest margin (NIM) could dip to 1.8%-1.9% by 2026 as interest rates continue to decline. UOB may proactively manage its book to protect its margins, for example by investing in

longer-dated debt securities and increasing its share of low-cost current and savings account (CASA) deposits. The bank had a CASA ratio of 57% as of end-September 2025, up from 54.6% as of end-2024.

We expect credit costs to normalize to 30 basis points (bps)-35 bps in 2026. UOB could have a credit cost of 60 bps-70 bps in 2025, up from 28 bps in 2024. This is after the bank made a one-off pre-emptive general provision of Singapore dollar (S\$) 615 million in the third quarter to factor in macroeconomic uncertainties and a slow recovery in the commercial real estate sector.

With the increased provisions, UOB's nonperforming loan (NPL) coverage ratio improved to 100% as of end-September 2025 from 88% as of end-June 2025. The bank's unsecured NPL coverage ratio rose to 240% from 209% over the same period.

Sound capitalization and good liquidity underpin our ratings. UOB remains well-capitalized, with a common equity Tier-1 ratio of 14.6% as of end-September 2025. This was comfortably above the regulatory minimum of 9%. The bank also had good liquidity coverage of 143%. It will likely generate sufficient retained earnings to keep pace with its loan growth while accommodating a dividend payout ratio of about 50%.

Outlook

The stable outlook on UOB reflects our expectation that the bank will maintain its high systemic importance in Singapore. We are likely to keep our assessment of its stand-alone credit profile (SACP) within the 'a' category over the next 12-24 months.

We believe both positive and negative rating actions are unlikely over the next one to two years.

Downside scenario

Our assessment of UOB's SACP would need to decline by at least two notches for a downgrade.

We may revise downward the SACP if UOB's asset quality deteriorates significantly from our base case, or if credit risk from the vulnerable SME sector increases, especially if economic recoveries are prolonged in the bank's markets.

A downward revision of the SACP would lead to a downgrade of the hybrid securities that we notch down from the SACP.

Upside scenario

We believe rating upside is limited over the next 12-24 months.

Anchor: 'bbb+' Weighted Average Anchor Derived From UOB's Regional Footprint

UOB is Southeast Asia's third-largest bank by asset size, based in Singapore. The bank has a presence across multiple countries in the region: Singapore (50% of gross loans as of end-June 2025), Greater China (14%), Malaysia (10%), Thailand (8%), and Indonesia (3%).

UOB's wide geographical exposure anchors our rating. In our opinion, the bank's geographical exposure across markets helps diversify risks and returns. Our blended 'bbb+' anchor for UOB draws on our view of the economic and industry risks in the countries where the bank operates. While the wide range of GDP per capita, varying economic fundamentals, and different macroeconomic conditions of those economies help broaden UOB's revenue streams, it also subjects the bank to more types of idiosyncratic risks.

UOB's main market of Singapore is a high-income and well-diversified economy, with a stable policy environment. Our base case assumes Singapore's real GDP will grow by 2.5% in 2025 and 1.8% in 2026.

Meanwhile, China's protracted property sector downturn and trade uncertainties could slow its GDP growth to 4.6% in 2025. Thailand and Indonesia are still working through asset quality challenges from the pandemic days. But we believe UOB has built up sufficient capital buffers and loan loss provisions to absorb any impact from continuing geopolitical tensions and uncertainties.

Chart 1

Business Position: Strong Domestic Franchise With Diversified Business Streams

UOB's significant domestic share of deposits and loans and diversified business profile support its strong business position. The bank enjoys stable domestic market shares, which we estimate at about 18% for system deposits and 20% for system loans as of end-2024.

UOB's wide presence in Southeast Asia and Greater China helps the bank capture cross-border investments and trade flows, further boosting its strong domestic franchise. The bank also has a niche in serving SMEs, with relationships forged with its customers over decades.

A diversified business profile will support UOB's stable performance over the next 24 months. The bank's net interest income shrank a marginal 3% year on year in the first three quarters of 2025, to S\$7 billion and accounting for about 66% of operating revenues. The decrease was due to a 13 bp compression in reported NIM to 1.92% for the first nine months of 2025, from a year ago.

Net interest income will contract modestly over 2026. This is due to our expectation of slower loan growth on continued economic uncertainties and lower interest rates. Offsetting this will be higher fee income, buoyed by higher client trading and wealth management activities on the back of market volatility. UOB's net fee income increased 6% year on year to S\$1.9 billion in the first nine months of 2025.

Capital And Earnings: Healthy Capitalization To Anchor Stability

We expect UOB to maintain a risk-adjusted capital (RAC) ratio of 8.0%-8.5% over the next two years, assuming:

- Slower loan growth of 3%-5% as credit demand slows on economic uncertainty. Total gross loans have increased 3.8% year to date to S\$351 billion.
- A decline of NIM to 1.8%-1.9% by 2027 as interest rates slide, partially offset by active liability management.
- Credit costs of 60 bps-70bps in 2025 and 30 bps-35 bps from 2026 onward.
- 50% dividend payout ratio.

UOB reported a CET1 ratio of 14.6% and Tier 1 ratio of 15.6% as of end-September 2025, well above regulatory minimums.

We believe UOB will maintain ample capital buffers, with support from strong profitability and internal capital generation. While the bank's profitability took a hit from pre-emptive provisions during the quarter ending September 2025, we believe this was one-off. Profitability, as measured by the return on average assets, could improve to 1%-1.1% by 2027 from an annualized 0.81% in the first nine months of 2025.

UOB is sitting on excess capital after implementing Basel III reforms in July 2024, like its domestic peers. The bank has paid out S\$800m of special dividends and completed 25% of its three-year S\$ 2billion share buyback program as of end-September 2025. We believe its balanced capital management strategy will provide it with a sufficient buffer to pursue loan growth and meet any losses.

Risk Position: Asset Quality To Remain Sound Despite Large One-Off Provision

UOB's asset quality could deteriorate modestly over the next 12-24 months amid global economic uncertainties and a prolonged recovery in the commercial real estate sector. The bank's NPL ratio could increase to 1.7% by 2026. Its headline NPL ratio was stable at 1.6% in the third quarter of 2025, despite rising NPLs across its key markets. This was due to higher write-offs and recoveries.

We expect the large pre-emptive provision in the third quarter to be one-off. UOB set aside a S\$615m general provision amid economic uncertainties and headwinds in the real estate sector. Credit costs for 2025 could thus rise to 60 bps-70 bps, before normalizing to 30 bps-35 bps from 2026.

UOB's NPL coverage ratio consequently improved to 100% as of end-September 2025, from 88% as of June 2025. This was more closely aligned with the levels of domestic peers. Similarly, the bank's unsecured NPL coverage ratio jumped to 240% from 209%.

Ongoing challenges in the commercial real estate sector in Greater China and the U.S. should not materially hurt UOB's asset quality. We estimate the bank has small exposure to commercial real estate loans in both regions, at around 1% of its total loan book each.

Escalating trade tensions and tariffs may have a more pronounced impact on Thailand and Indonesia, which have high restructured loans. That said, UOB is predominantly exposed to SMEs in Singapore and Malaysia, where risks are not as high.

We believe UOB will remain prudent when enlarging its regional franchise and will maintain sufficient provisioning buffers for any potential deterioration in credit quality.

Funding And Liquidity: Strong Franchise Supports

Funding And Liquidity

UOB enjoys a large and stable retail deposit base as one of the leading banks in Singapore. This underpins the bank's strong funding and liquidity profile. The bank has an extensive branch and ATM network in Singapore, compared with smaller local financial institutions and foreign banks.

UOB's total deposits rose about 4% to S\$419.7 billion year to September 2025, tracking loan growth. The bank maintained its loan-to-deposit ratio at 82.5%.

UOB has a significant pool of low-cost CASA deposits, at S\$239 billion as of end-September 2025. These made up 57% of the bank's total deposits, up from 54.6% at end-2024. The bank's ability to add CASA deposits despite being one of the first local banks to lower deposit rates underscores its sticky deposit base and strong franchise.

We believe UOB can comfortably maintain its funding profile. This is given the bank's large, sticky deposit base and limited reliance on short-term wholesale funding, at 8.4% of its total funding as of end-June 2025.

We assess UOB's liquidity as strong because of the bank's rich pool of liquid assets. The bank had a ratio of broad liquid assets to short-term wholesale funding of about 3x as of end-June 2025. It reported an all-currency liquidity coverage ratio of 143%.

Support: Two Notches Of Uplift For Government Support

We assess UOB as having high systemic importance in Singapore. We therefore see a high likelihood of support from the government of Singapore. As a result, the rating is two notches higher than the SACP.

Environmental, Social, And Governance

We consider environmental, social, and governance (ESG) factors to be neutral for the rating. UOB and its peers in Singapore lead their ASEAN peers in the integration of ESG elements into their daily business operations and credit underwriting policies.

UOB formalized its group sustainability framework in 2019 and published its first stand-alone sustainability report in 2020. The bank's Responsible Financing Policy incorporates ESG risks into daily corporate credit underwriting decisions. The bank subjects transactions identified with high ESG risks to additional assessments by the group sustainability committee and if needed, further escalations to the management executive committee.

UOB is committed to achieving net zero emissions by 2050 in six focus sectors: power, automotive, oil and gas, real estate, construction, and steel. In line with this commitment, the bank will no longer finance upstream oil and gas projects approved after 2022. It will also exit financing thermal coal sector by 2039.

The above is in addition to UOB's existing prohibitions on new project financing of greenfield or expansion of coal-fired power plants and thermal coal mines. UOB extended S\$58 billion in sustainable financing as of end-2024, ahead of its target of S\$30 billion by 2025.
