Nudging up estimates, stay OW

DBS delivered a 2% beat in 1Q26, which appears numerically small, but showcases underlying strengths across businesses and capabilities. These include hedging, capital markets, wealth management, ALM, bancassurance, technology as well as underwriting. A beat at 17% RoE levels, with a positive shift in guidance (details rather than big changes) suggests the franchise is on track to gain market share across profit pools. Accordingly, we expect the re-rating for DBS (which paused in the last 3M) to continue. With every passing quarter, our characterization of DBS as the "JPM of Asia" appears truer. Maintain OW.

- **We are increasing our estimates by 3% for 2026-28**, led by revenues. We expect NIM to come off to 1.85% this year (-16bps y/y), on tight credit standards (higher HQLA and low-yielding loans) and lower SORA. Yet, hawkish dissents at Fed ([link](#)) and recent pick-up in SORA limits downside beyond a point. We forecast a small NII decline (-1% y/y), with upside risk if deposits grow 10% or higher (in SGD), and the bank is able to roll over the hedges at favorable spreads (~40bps lower for maturing YTD hedges vs. guidance of ~50bps lower). Any hardening of SG mortgage rates (1Y SORA swaps up 8bps in 2M, O/N SORA up 65bps in 3W) will be a good indicator of pricing discipline and NII/NIM.
- **Non-II strength** has been led by WM (\$10bn NNM, 58% of \$492bn AuM in investments, 74bps fee rate in 1Q). Further, bancassurance was notably strong in 1Q, broadening WM fee sources. Capital markets (treasury customer flow, ECM, IB, brokerage) is growing quite well, which we expect to sustain amidst value unlock initiatives ([link](#), [link](#)) in Singapore. DBS has been able to build scale in transaction services, especially with technology. This has adjacencies with capital markets, IB, deposits/NII as well as WM; hence commands high multiples.
- **NPA formation was low in 1Q** and credit costs at the lower end of unchanged guidance. LLR/loans for the bank is at 127bps, with 79/52bps of loans as GPs/overlays. At 40% LGD, that is adequate for 1.3-2% of incremental loans becoming NPLs. Credit RWAg and loan gr has averaged 2.6/3.6% in the last 5Y, suggesting limited build-up of credit risk. Hence, we lower our credit cost assumptions by a couple of bps to 18bps for 2026. Yet, we maintain 2027 credit costs of 24bps, as we factor in a probability of long tail outcomes.
- **We expect the 6c increase in quarterly DPS** to 72c in 4Q26, unless tail scenarios lead the board to conserve capital. More importantly, we keep our forecasts of 20c additional special dividend in FY26, from \$3bn set aside for buybacks (12% utilized). There are no disclosed changes to self-imposed limits of max 10% of daily trading volumes in buybacks, as well as a preference for being tactical. DBS has reduced earnings cyclicality, which should lead to continued re-rating; and relative outperformance in weak markets. Hence, we do not see the bank utilizing any meaningful portion of its buyback budget by the end of 2026.

Summary Investment Thesis and Valuation

Investment Thesis

We are OW on DBS.

- DBS has delivered one of the best RoE expansions in the last decade as technology and process-led changes across the franchise have resulted in better growth, efficiency and returns. The bank's digital strength is driving gains in loan market share, WM, as well as underwriting.
- The bank's commitment to and delivery of payouts in numerous forms (progressively increasing regular dividends, special dividends and buybacks) allows investors to pay a multiple for the income stream.
- The bank has restructured to lower its loan intensity (48% loans to assets in 2028E vs. 63% in 2017), with the WM business contributing an increasingly larger share. We expect S\$40bn NNM in 2026E (flat vs. 2025, which was a record), supporting strength in non-II. Further, non-II sources are broadening across capital markets and transaction banking.

Valuation

Our Jun-27 PT of S\$64 is based on a fair P/B of 2.43x, assuming a normalized RoE of 16.6%, a risk-free rate of 3.85%, a cost of capital of 9.4% and a growth rate of 4.3%. We increased our PT to S\$64 (from S\$62) as a result of 1Q Earnings beat, consistent WM AUM growth leading to higher Non-II and revenues, stable AQ and Capital return thesis.

Revenue-led estimate upgrades

We are increasing our estimates by 3% for 2026-28, led by revenues. We expect NIM to come off to 1.85% this year (-16bps y/y), on tight credit standards (higher HQLA and low yielding loans) and lower SORA. Yet, hawkish dissents at Fed ([link](#)) and recent pick-up in SORA limits downside beyond a point. We forecast small NII decline (-1% y/y), with upside risk if deposits grow 10% or higher (in SGD), and bank is able to roll over the hedges at favorable spreads (~40bps lower for maturing YTD hedges vs. guidance of ~50bps lower). Any hardening of SG mortgage rates (1Y SORA swaps up 8bps in 2M, O/N SORA up 65bps in 3W) will be a good indicator of pricing discipline, and NII/NIM.

Non-II momentum underpins a valuation premium

Non-II strength has been led by WM (\$10bn NNM, 58% of \$492bn AuM in investments, 74bps fee rate in 1Q). Further, bancassurance was notably strong in 1Q, broadening WM fee sources. Capital markets (treasury customer flow, ECM, IB, brokerage) is growing quite well, which we expect to sustain amidst value unlock initiatives ([link](#), [link](#)) in Singapore. DBS has been able to build scale in transaction services, especially with technology. This has adjacencies with capital markets, IB, deposits/NII as well as WM; hence commands high multiples.

Benign asset quality backdrop

NPA formation was low in 1Q and credit costs at lower end of unchanged guidance. LLR/loans for the bank is at 127bps, with 79/52bps of loans as GPs/overlays. At 40% LGD, that is adequate for 1.3-2% of incremental loans becoming NPLs. Credit RWAg and loan gr has averaged 2.6/3.6% in last 5Y, suggesting limited build up of credit risk. Hence, we lower our credit cost assumptions by a couple of bps to 18bps for 2026. Yet, we maintain 2027 credit costs of 24bps, as we factor in a probability of long tail outcomes.

Capital return upside

We expect the 6c increase in quarterly DPS to 72c in 4Q26, unless tail scenarios lead the board to conserve capital. More importantly, we keep our forecasts of 20c additional special dividend in FY26, from \$3bn set aside for buybacks (12% utilized). There are no disclosed changes to self-imposed limits of max 10% of daily trading volumes in buybacks, as well as a preference for being tactical. DBS has reduced earnings cyclicality, which should lead to continued re-rating; and relative outperformance in weak markets. Hence, we do not see the bank utilizing any meaningful portion of its buyback budget by end of 2026.

Management views across crises

We assessed the differences in DBS management communication across recent stress events, using LLM. The posture on current challenges remains relatively confident, in our view.

Covid, 2020

Positives:

- Digital readiness turned the crisis into a growth driver with a 99% cloud-enabled footprint and 3x uplift in mortgage apps. The bank took this crisis as an opportunity to scale up.
- Moratoriums and risk-sharing loans positioned DBS as a flagship institution, building regulatory goodwill.
- The bank avoided layoffs and added ~2,000 jobs even as some peers retrenched.

Negatives:

- Net profit was down 26% and allowances grew 4x to SGD 3.07bn. The management front-loaded provisions and took a conservative approach, recognising losses early and building buffers upfront.
- Dividend reduced to 87 cents (regulatory directive).
- Oil & gas, aviation, hospitality portfolios flagged as high-risk segments with management indicating elevated uncertainty around credit outcomes.

Neutral:

- Board took a 10% fee cut, symbolic but highlighted alignment with stakeholders.

Tariffs, 2025

Positives:

- Management explicitly framed the tariff disruption as an *opportunity* through supply chain shifts, alternative payment flows, working capital demand, wealth inflows, and increased hedging activity.
- The bank's continued emphasis on fortifying the balance sheet paired with capital returns implied management confidence that buffers were already sufficient.

Negatives:

- Even if the structural positioning was sound, client activity slowed which posed to be a near-term revenue headwind.
- China/Hong Kong real estate and semiconductor supply chains were explicitly flagged as stress-test focal points reflecting a more granular risk lens than in the Covid period.

Neutral:

- The commentary on asset quality shifted from benign to vigilant. The change in tone is meaningful for interpreting the management's internal risk stance.

Energy Crisis, 2026

Positives:

- DBS has limited direct Middle East exposure and the asset quality is stable. We believe that the management is indicating that this is not their crisis directly.
- SGD 10mn customer support commitment to intensify efforts to help Singaporeans manage cost pressures.

Negatives:

- The bank's remarks on second-order impacts regarding energy-intensive supply chains flags vigilance before those effects become visible in reported numbers.
- Prudent reserves maintained with the management withholding buffers which suggests that the tail-risk is not fully dismissed.

Neutral:

- Fixed-rate assets at ~\$210bn and hedging activity at better spreads indicates that the bank is monetising volatility rather than being hurt by it, at least for now.

DBS Group Holdings (Overweight; Price Target: S\$64.00)

Investment Thesis

We are OW on DBS.

- DBS has delivered one of the best RoE expansions in the last decade as technology and process-led changes across the franchise have resulted in better growth, efficiency and returns. The bank's digital strength is driving gains in loan market share, WM, as well as underwriting.
- The bank's commitment to and delivery of payouts in numerous forms (progressively increasing regular dividends, special dividends and buybacks) allows investors to pay a multiple for the income stream.
- The bank has restructured to lower its loan intensity (48% loans to assets in 2028E vs. 63% in 2017), with the WM business contributing an increasingly larger share. We expect S\$40bn NNM in 2026E (flat vs. 2025, which was a record), supporting strength in non-II. Further, non-II sources are broadening across capital markets and transaction banking.
- The shifts in oil prices could lead to asset quality issues across the sector. Yet, NPA formation was low in 1Q and credit costs were at lower end of guidance. LLR/loans for the bank is at 127bps, with 79/52bps of loans as GP/overlay. Further, credit RWAg and loan gr has averaged 2.6/3.6% in last 5Y, suggesting limited build up of credit risk. We expect 18bps credit costs this year, with 24bps in FY27 given potential tail events.
- We expect 2026 EPS to mark a low for the next 5Y. Hence, the regular DPS of S\$3.06 and part of the special can stay intact. We estimate the bank can potentially pay over S\$3.50 DPS (2026E) for years to come.
- Overall, risk-reward is positive with the stock trading at 2.4x 2026E PB and 5.9% dividend yield.

Valuation

Our Jun-27 PT of S\$64 is based on a fair P/B of 2.43x, assuming a normalized RoE of 16.6%, a risk-free rate of 3.85%, a cost of capital of 9.4% and a growth rate of 4.3%.

Risks to Rating and Price Target

Upside catalysts include: (1) further increases in DPS; (2) stronger-than-expected deposit inflows; (3) sustained improvements in underwriting and monitoring, leading to lower-than-expected credit costs; (4) better-than-expected efficiency gains due to digital investments; and (5) better-than-expected WM performance on sustained inflows into SG.

Downside risks include: (1) dividend disappointment; (2) asset quality deterioration, potentially from trade or oil-related exposures, as well as CRE; and (3) faster and/or larger Fed rate cuts or decline in SORA, which would drive a larger than expected NIM compression. Any acquisition would come with two-sided risks.

DBS Group Holdings (DBSM.SI, DBS SP) Price Chart

Source: Bloomberg Finance L.P. and J.P. Morgan; price data adjusted for stock splits and dividends.
Initiated coverage Dec 11, 2001. All share prices are as of market close on the previous business day.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.

J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.
